WINDOWS

MACOS

GENERAL

Display Manual / Help

Access help documentation for a specific command.

CURRENT VIEW

WINDOWS

help / ??

USAGE

dir /?

Standard Windows help flag.

FILE OPERATIONS

List Files

View a list of files and folders in the current directory.

CURRENT VIEW

WINDOWS

dir

USAGE

dir /w

CMD standard. Powershell also supports "ls".

DIRECTORY MANAGEMENT

Change Directory

Navigate to a different folder in the filesystem.

CURRENT VIEW

WINDOWS

cd

USAGE

cd C:\Users

Same as Linux, but uses backslashes.

DIRECTORY MANAGEMENT

Show Current Path

Print the full path of the current working directory.

CURRENT VIEW

WINDOWS

cd

FILE OPERATIONS

Read File Content

Display the contents of a text file in the terminal.

CURRENT VIEW

WINDOWS

type

DIRECTORY MANAGEMENT

Create Directory

Create a new empty folder.

CURRENT VIEW

WINDOWS

mkdir / md

LINUX

WINDOWS

MACOS

GENERAL

Display Manual / Help

Access help documentation for a specific command.

CURRENT VIEW

MACOS

man

USAGE

man ls

Standard Unix manual pages.

FILE OPERATIONS

List Files

View a list of files and folders in the current directory.

CURRENT VIEW

MACOS

ls

USAGE

ls -G

-G adds color to the output.

DIRECTORY MANAGEMENT

Change Directory

Navigate to a different folder in the filesystem.

CURRENT VIEW

MACOS

cd

USAGE

cd ~/Documents

Supports tilde for home directory.

DIRECTORY MANAGEMENT

Show Current Path

Print the full path of the current working directory.

CURRENT VIEW

MACOS

pwd

FILE OPERATIONS

Read File Content

Display the contents of a text file in the terminal.

CURRENT VIEW

MACOS

cat

DIRECTORY MANAGEMENT

Create Directory

Create a new empty folder.

CURRENT VIEW

System Info

GENERAL

Display Manual / Help

Access help documentation for a specific command.

LINUX

man

Example: `man ls`

Opens the manual page for the command.

WINDOWS

help / ??

Example: `dir ??`

Standard Windows help flag.

MACOS

man

Example: `man ls`

Standard Unix manual pages.

FILE OPERATIONS

List Files

View a list of files and folders in the current directory.

LINUX

ls

Example: `ls -la`

Standard list. `-la` shows hidden files/details.

WINDOWS

dir

Example: `dir /u`

CMD standard. Powershell also supports "ls".

MACOS

ls

Example: `ls -G`

`-G` adds color to the output.

DIRECTORY MANAGEMENT

Change Directory

Navigate to a different folder in the filesystem.

LINUX

cd

Example: `cd /home/user`

Standard navigation.

WINDOWS

cd

Example: `cd C:\Users`

Same as Linux but uses backslashes.

MACOS

cd

Example: `cd ~/Documents`

Supports tilde for home directory.

UNIVERSAL COMMAND HELPER

System Administration Bridge

Search operations (e.g. 'copy file', 'ls', 'delete')...

COMPARISON ON

Why Cross-Platform Knowledge Matters?

The Modern Admin

Today's infrastructure often spans Windows servers, Linux containers, and macOS workstations. Proficiency in all three is a superpower.

Terminal Efficiency

GUIs are slow. Mastering CLI allows for automation, scripting, and faster troubleshooting in headless environments.

Quick Tip

On Windows, **PowerShell** is now the preferred terminal environment. It supports many Linux aliases (like 'ls', 'cat', and 'pwd') natively, making the transition easier for Unix users.

[Explore PowerShell Core for cross-platform scripting.](#)
